PROFESSIONAL SUMMARY

Operations Data Analyst with 5+ years of experience turning operational and case data into clear, prioritized decisions through data-quality checks, root-cause analysis, pivot and BI reporting, and turnaround tracking against a 90% within-24-hours target. Now transitioning into machine learning: completed an AI/ML internship (Jul 2026 - Sep 2026) that produced a leakage-aware model with Precision@20 of 0.900 against 0.250 for a baseline, earned Machine Learning and AI Fluency certifications, is studying B.Sc. Data Science and Analytics, and is building an AIOps log analyzer. Seeking a data analyst or AI/ML role.

TECHNICAL SKILLS

Data Analysis and BI: SQL, Excel (filters, pivot tables), Power BI, Tableau, data cleaning, exploratory analysis, data-quality checks

Programming: Python, pandas, NumPy, DuckDB

Machine Learning: Feature engineering, classification, Random Forest, grouped validation, baseline design, leakage detection, model evaluation, Precision@K

Libraries and Applied Work: scikit-learn, matplotlib, search intelligence, human-in-the-loop systems

Operations Strengths: Root-cause analysis, compliance checks, stakeholder communication, escalation management

PROFESSIONAL EXPERIENCE

Senior Operations Analyst | Apr 2025 - Present

First Advantage Global Operating Centre | Operations Analyst, Jun 2023 - Apr 2025

- Analyze criminal background-verification case data, about 180–200 cases per day across 20+ clients, checking records against compliance criteria and surfacing discrepancies before decisions are made.
- Extract the open-case report, clean and filter the data, and build pivot summaries and BI views of pending cases by client response status, giving the team a clear picture of what is waiting and why.
- Rank pending cases by priority from that analysis and share the ranked list with teammates, so effort goes to the cases that matter most and the 90% within-24-hours turnaround target stays on track.
- Monitor turnaround and exceptions against the target and flag gaps to clients and internal teams.
- Investigate recurring discrepancies to find the root cause, and turn the findings into clear documentation requirements for clients to support process improvement.
- Maintain structured trackers that serve as a reliable source of case data for quality reviews and follow-up decisions.

AI/ML Engineering Intern | Jul 2026 - Sep 2026

FlyRank AI - AI/ML & AI Fluency Internship Program

- Developed an end-to-end search-intelligence pipeline to prioritize client content for manual CTR review.
- Built a modelling dataset of 73,481 eligible client-content observations across 33 pseudonymized clients and evaluated a Random Forest on a grouped holdout of 12 clients with zero client overlap.
- Achieved Precision@20 of 0.900 versus 0.250 for a transparent February-only baseline on the held-out population; completed validation and feature-leakage audits.
- Translated model outputs into a human-review action framework and published reproducible notebooks, validation charts, public-safe summaries and a technical capstone paper.
- Completed training and practical work across both the Machine Learning and AI Fluency programs.

Business Operations Analyst | Mar 2022 - May 2023

Dunzo Digital Pvt Ltd

- Analyzed customers' refund history to identify refund and billing issues and recurring patterns.
- Investigated billing, refund and account issues across customer, delivery-partner and merchant workflows using structured case review and root-cause analysis.
- Coordinated with delivery-partner, merchant-support and internal teams to document outcomes, escalate exceptions and identify recurring process gaps.

Operational Specialist | Jan 2021 - Mar 2022

Reliance Jio Infocomm

- Resolved network, billing, account and SIM-activation queries through structured troubleshooting, system checks and clear customer communication.
- Maintained accurate interaction records, followed escalation procedures and identified recurring service issues requiring technical or back-office support.

PROJECTS

Search Intelligence Engine & Content Opportunity Scoring

Public project | [GitHub repository](#)

- Tested whether February search and engagement signals could rank content likely to fall below the CTR benchmark in March better than a transparent February-only baseline.
- Built a grouped-validation pipeline, ran a leakage audit and converted model scores into a human-review framework with monitoring and retraining triggers.
- The Random Forest achieved Precision@20 of 0.900 versus 0.250 for the baseline; published the research paper, notebooks, charts and public-safe summaries.

Autonomous AI-Driven DevOps Log Analyzer & Self-Healing System

In progress

- Designing an AIOps system that parses real-time server and application logs and classifies failure patterns using machine learning and NLP.
- Building feature extraction and supervised classification models to detect and categorize error types, aiming to reduce mean-time-to-detection (MTTD) during outages.
- Planning a rule-guarded remediation module with rollback, audit trails and a real-time monitoring dashboard.

EDUCATION

B.Sc. Data Science and Analytics | 2025-2028

Jain University, Bengaluru

Diploma in Civil Engineering | Completed 2020

Government Women's Polytechnic, Hubli

CERTIFICATIONS

Machine Learning Internship Program | Issued Oct 2026

FlyRank AI | Credential ID: FR-D11-B55A0-891DD

AI Fluency Internship Program | Issued Oct 2026

FlyRank AI | Credential ID: FR-D11-EC35C-51C18
